Summary

I build and run data platforms for firms that have outgrown spreadsheets and Access. Since founding Tabby Stack in 2022 I've served 15+ clients, including a venture capital firm. Ten years in data, on Snowflake, dbt, BigQuery and in-warehouse ML.

Professional Experience

Tabby Stack

Founder & Principal Data Architect

Philadelphia, PA

Jan 2022 – Present

- 15+ clients since 2022, with teams of up to 5 engineers. For several of them:
 - Stand up data stacks from scratch: warehouse, dbt models, self-service dashboards, and syncs into existing tools.
 - Build AI agents on governed warehouse data: Slack Q&A, alert feeds, and MCP access from Claude and ChatGPT.
 - Build ML models inside Snowflake: causal inference on the effect of outreach, and churn prediction.
- **Venture capital firm.** Built and run the firm's data platform: deal flow, portfolio and fund data in one warehouse, with self-service dashboards in place of reports built by hand in Access.
- **National business media company.** Merged fragmented first- and third-party sources into one warehouse. Built a real-time pipeline (Kafka, Dynamic Tables, Census) that made data minutes old, not hours. Moved every team onto it.
- **Our own products.** One pipeline of job postings feeds [SignalCat](#), hiring data for investors from 80+ hiring systems at 2,000+ companies (96% of the S&P 500), via Snowflake, S3 and MCP; and [Wait, What Do You Do?](#), a job board for data people.

Preset

Senior Data Engineer, alongside Tabby Stack's first year

San Mateo, CA (remote)

Jan 2022 – Mar 2023

- Built data models and pipelines on GCP and AWS, reported product and sales results to leadership, and set data team goals.

GrowthLoop (formerly Flywheel Software)

Senior Analytics Engineer

New York, NY (remote)

Dec 2020 – Dec 2021

- Built a campaign evaluation system for 100+ client audiences; worked with Google, Indeed and Mercari.
- Rebuilt the multi-client dbt project for dynamic model generation, scaling it 10×.

Earlier

- **Inspire Energy**, Data Engineer · Apr 2019 – Dec 2020
- **Penn Group of Companies**, Renewables Engineer & Analyst · Jul 2018 – Apr 2019
- **Susquehanna International Group**, Data Engineer, energy desk (grid analytics for FTR trading) · Mar 2017 – Mar 2018
- **Exelon**, Technical Strategist · Mar 2016 – Mar 2017

Education

Drexel University, M.S. Engineering Management

Jun 2018

Drexel University, B.S. Electrical & Computer Engineering; minors in Entrepreneurship, Energy Innovations

Jun 2018

Technical Skills

Warehouses and BI: Snowflake, BigQuery, Redshift, Postgres, Azure, Sigma, Superset, Tableau, Power BI

Pipelines: dbt, Airflow, Fivetran, Kafka, Census (now Fivetran Activations), Hightouch, Segment

Languages and ML: SQL, Python, pandas, scikit-learn, CatBoost, causal inference, JavaScript

Infrastructure: AWS (EC2, Lambda, DynamoDB, S3), GCP, Docker, GitHub Actions, Supabase
